

### **Radio Shack 8-channel FM Wireless Microphone Receiver**

This wireless microphone system is perfect for use in situations requiring a lecture to be wirelessly transmitted over a sound system, or for videotaped speeches or lectures. It includes a 900 MHz FM receiver that can be set at any one of 8 channels, a clip-on microphone and transmitter (requires 9v battery), a cable to connect the receiver to the digital camera, and a cable that can connect to a sound system.

### **Audio-technica Wireless Microphone System Model ATW-R202**

This wireless microphone system allows use of a wireless handheld mic for lectures or speeches to be videotaped or sent over a sound system. It includes a VHF, 170.25 MHz FM receiver with two antennas, AC power with docking power supply, and 1/4" audio output jack. It includes a cable to connect the receiver to the digital camera or to a sound system.

The handheld switched microphone/transmitter (requires 9v battery) also has a mic holder that can attach to a mic stand.

### **Amplified Computer Speakers**

These small speakers can be used with a digital projector and DVD or VCR to provide audio. Has AC transformer power cord and an audio cable with adaptor for use with VCR, DVD or digital projector.

### **Panasonic Microsonic Microcassette Recorder**

This is a very small 2-speed, handheld tape recorder has a built-in mic. It requires microcassettes (not included but can be supplied for a cost upon request) and AA batteries (supplied)
